

Baker Renewable Energy Installs Solar Technology at Mims Distributing in Raleigh, NC

Baker Renewable Energy was selected by Mims Distributing to install a 321kWp DC system atop the roof of their Raleigh, NC Facility. Mims Distributing recently constructed their new location in North Raleigh to support their growing business. The facility was built using an array of sustainable building practices one of which was the installation of this thin film, building integrated, photovoltaic system.

System Detail

Technology: Solar Photovoltaic

System Size: 321kWp DC

System Type: Roof Mount, adhered

Location: Raleigh, NC

About Mims Distributing

Mims Distributing is a beer distributor located in Raleigh, North Carolina. We service a nine county area in and around the Triangle region. It is our goal to be a leader in our industry by providing competitively-priced, high-quality products and world-class customer service. Our excellent customer service begins with knowing the accounts and building strong relationships with customers. A sales representative will consult with you to determine which beer brands best suit your establishment. We listen to your requirements on brands, pricing and selection, and provide recommendations that might sell well in your establishment. Beer preferences differ from one retail establishment to another, and Mims Distributing excels at being aware of what sells best in various locations around the state.
